The Quiet Revolution in Urban Farming

Across the rooftops of several large cities, a quiet change is under way. Residents who once bought all their vegetables from distant suppliers are now growing herbs, salad leaves and tomatoes above their own apartments. Supporters argue that urban farms reduce transport costs and give communities fresher food. Critics, however, point out that the yields remain small compared with traditional agriculture, and that the initial investment can be considerable. Despite these doubts, local councils are beginning to offer grants, hoping that the projects will also bring neighbours together.

What is the writer's attitude towards urban farming?

A Strongly enthusiastic

B Balanced, presenting both views

C Openly critical

D Unsure of the facts

8 · How the adaptive engine works

Each answer changes the next question, so ~30 questions pin down the level

1. **Start at B1**
2. **Answer a question**
3. **Update ability estimate**
4. **Pick closest-difficulty question**
5. **Confident? stop (~30 Qs)**
6. **Score, CEFR level, certificate**

Example path

Start B1 → correct → B2 → correct → C1 → wrong → B2 → wrong → B1+ → correct … the estimate narrows to a final level.

Why it is accurate

Every question has a measured difficulty. Real learner answers recalibrate that difficulty automatically over time.
